

Cleaning (Python)

vgsales contained 271 null value rows in Year column & 58 null rows in Publisher column

- Approach: Removed rows

games contained 13 null value rows in Ratings column

- Approach: Removed rows

Appropriate Type Casting

games contained columns 'Plays', 'Playing', 'Backlogs', 'Wishlist', 'Times Listed', 'Number of Reviews' as type object (string) while containing numeric values

- Approach: changed column type to int

Measures Created
